

# ArcMap ArcGIS Pro

Notes on making the transition from ArcMap to ArcGIS Pro

Aaron Raymond, GIS Analyst, City of Renton

# Overview

- Starting Out
- Positives
- Tips for Set Up
- Tips for Daily Use
- Pro Tics
- Should you make the switch?

# Starting Out

- Learning a new software
- Familiar yet different
- There will be frustration
- Try it out for a while
- New tool in tool kit

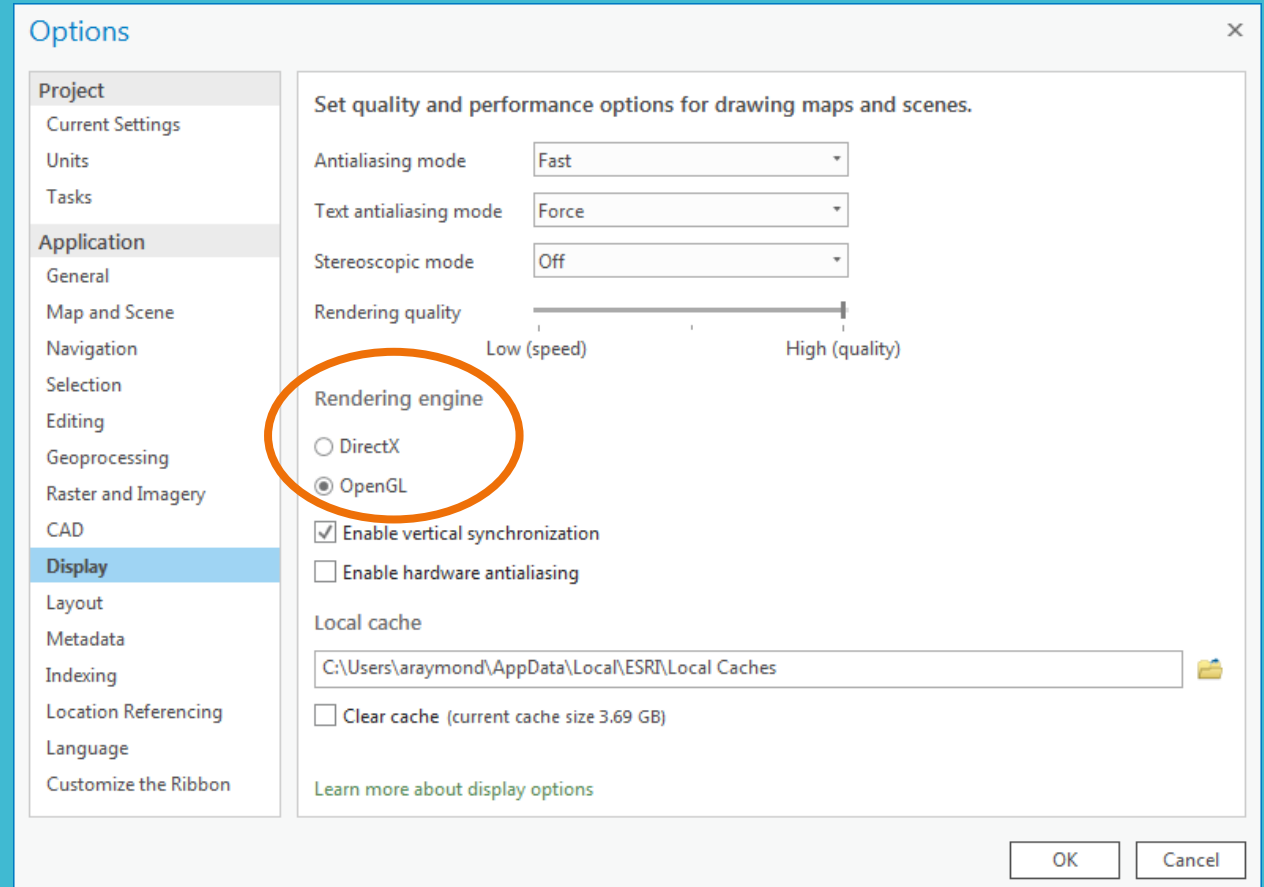

# Positives

- Graphic sensibilities
- Refresh rates
- Multiple maps within one project
- Auto set up of geodatabase
- Online data
- Contents pane settings
- Geoprocessing trail

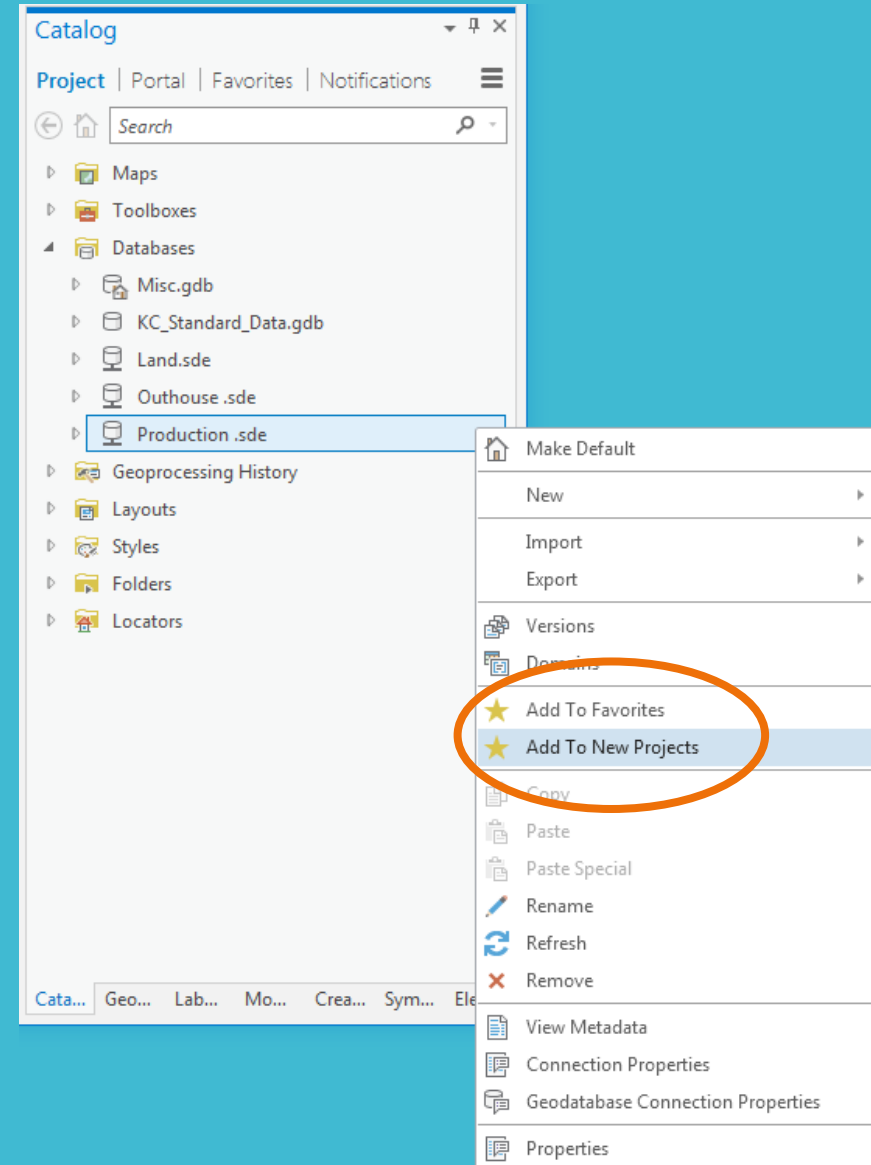

# Tips for Set Up

- Rendering Engine (OpenGL)
- Mark database and file connections as favorites
- Ribbons and panes
- Customize ribbons
- Styles
- Online help

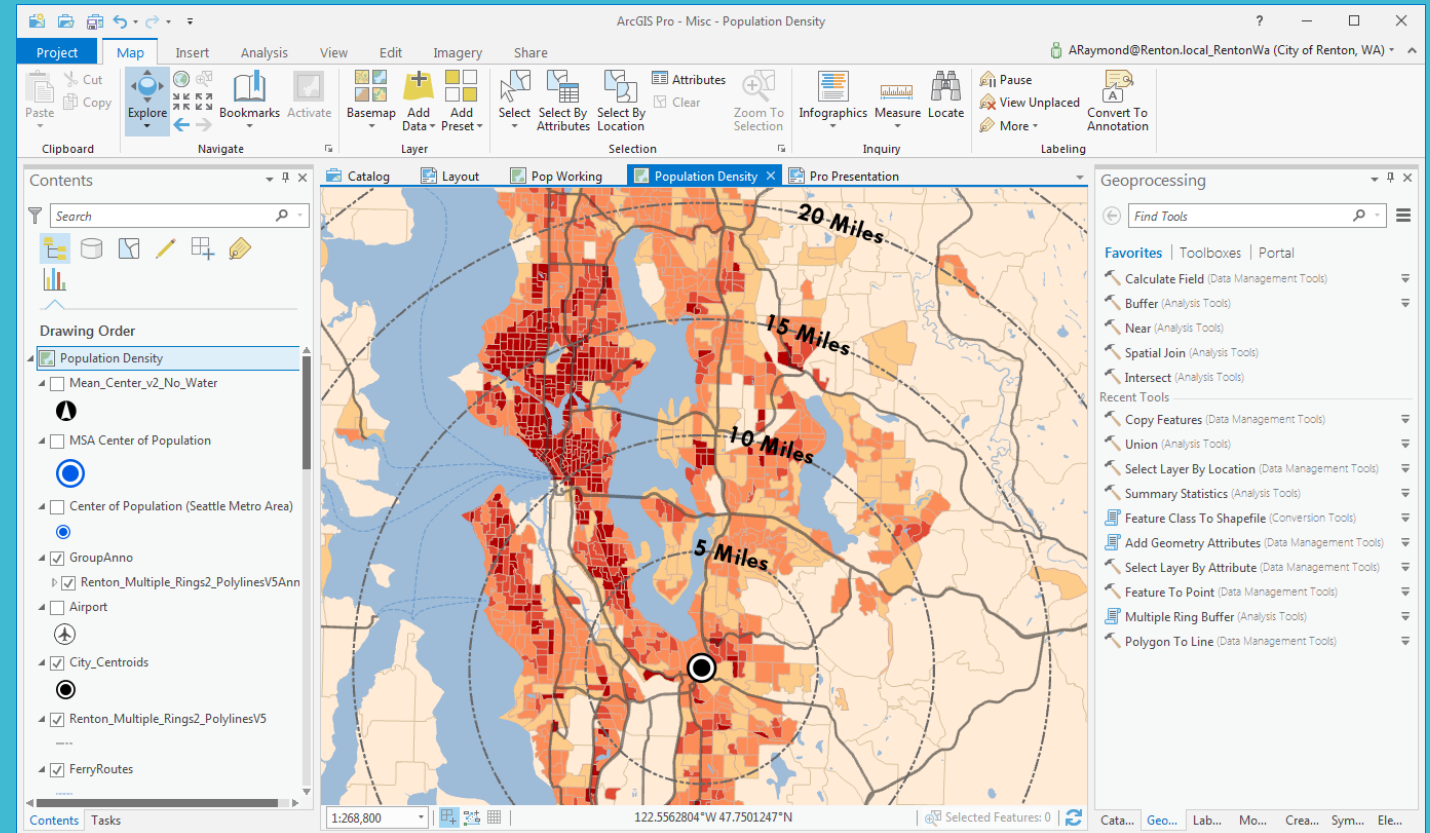

# Tips for Set Up

- Rendering Engine (OpenGL)
- Mark database and file connections as favorites
- Ribbons and panes
- Customize ribbons
- Styles
- Online help

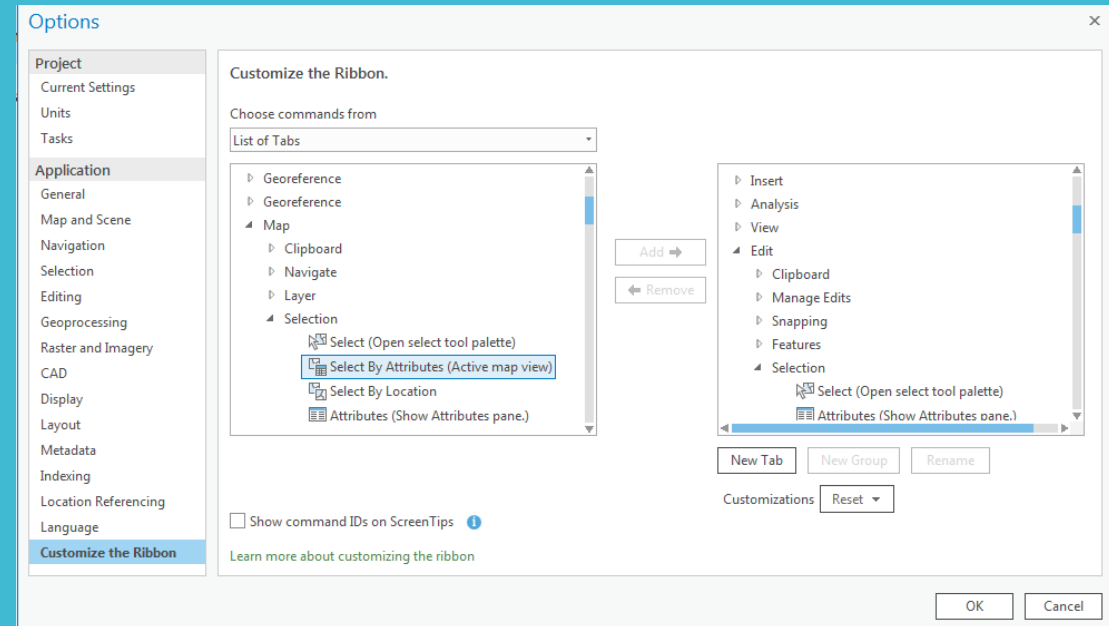

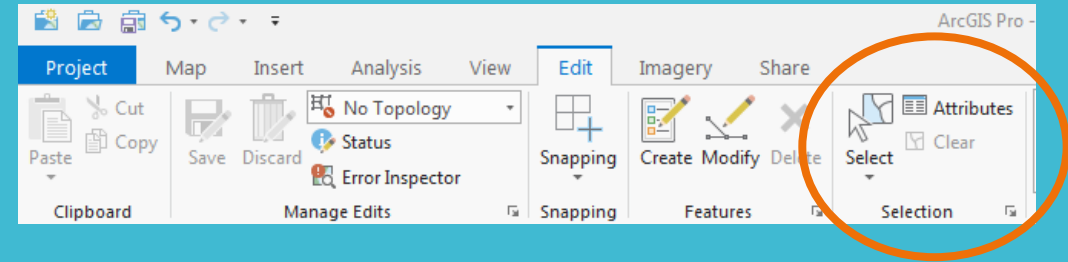

# Tips for Set Up

# Tips for Set Up

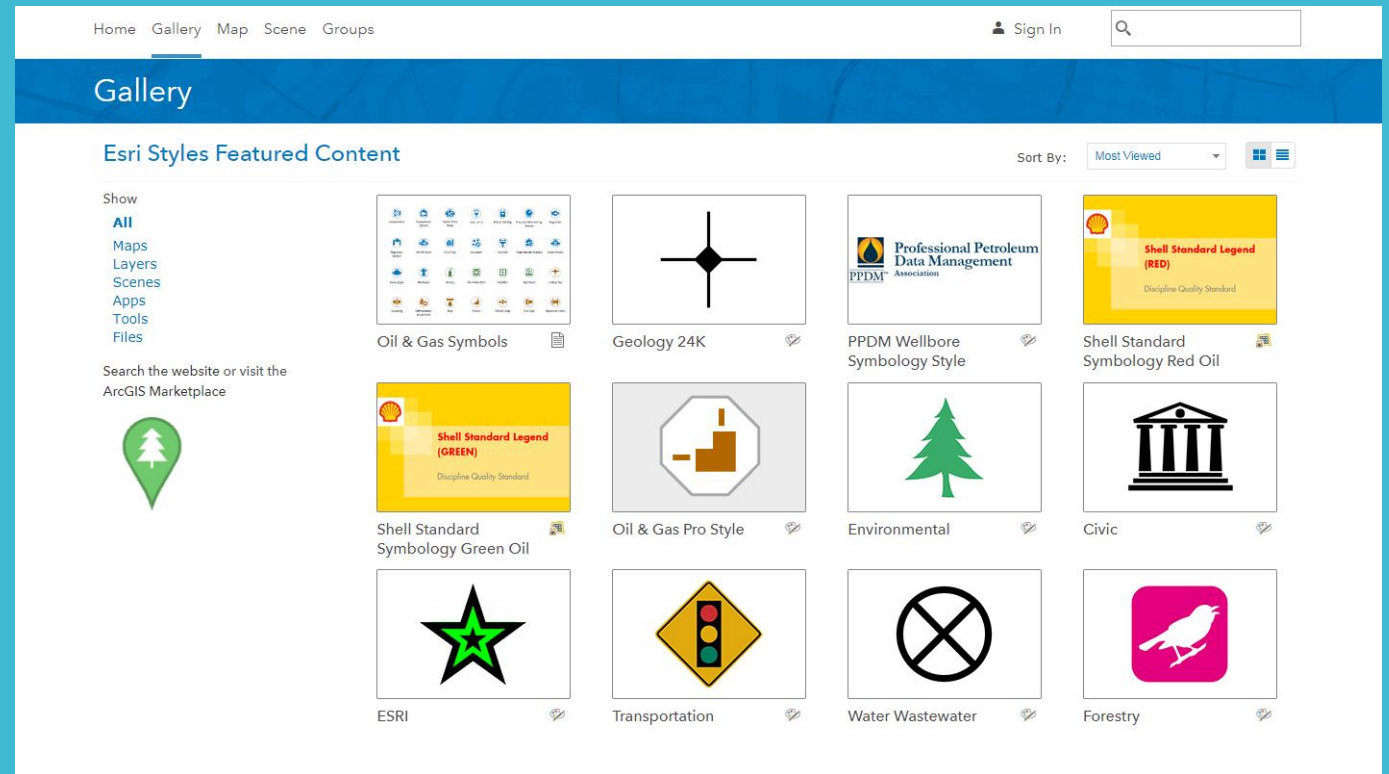

- Rendering Engine (OpenGL)
- Ribbons and panes
- Mark database and file connections as favorites
- Customize ribbons
- Styles
- Online help

A screenshot of the ArcGIS Pro Help page. The top navigation bar includes links for Home, Get Started, Help (which is active), Tool Reference, ArcPy, SDK, and Community. Below the navigation bar, the page is titled "ArcGIS Pro help". On the left side, there is a table of contents with links to Projects, Maps, Data, Analysis and geoprocessing, Metadata, Layouts, Production, Workflows, and Share your work. The main content area on the right is titled "Build projects" and contains a list of bullet points: "Build projects", "Map and visualize your data", "Perform analysis and geoprocessing", "Manage and edit your data", "Use tasks to streamline your work", and "Share your work". Below this list, there is a paragraph explaining that ArcGIS Pro is the essential application for creating and working with spatial data on your desktop. It provides tools to visualize, analyze, compile, and share your data. Another paragraph explains that ArcGIS Pro organizes the resources that you use to do your work into projects. A project contains maps, layouts, layers, tables, tasks, tools, and connections to servers, databases, folders, and styles. Projects can also incorporate content from your organization's portal or ArcGIS Online. At the bottom, there is another list of bullet points: "Build your own project or start by opening a project template created by Esri or others in the community.", "You can find and add content from a folder, a portal, or ArcGIS Online by browsing or searching by keywords.", "Be sure to save your project so it's ready for you the next time you start ArcGIS Pro.", and "When you want to share your project, you can create project templates for others to use as a starting point or package the project and its data."

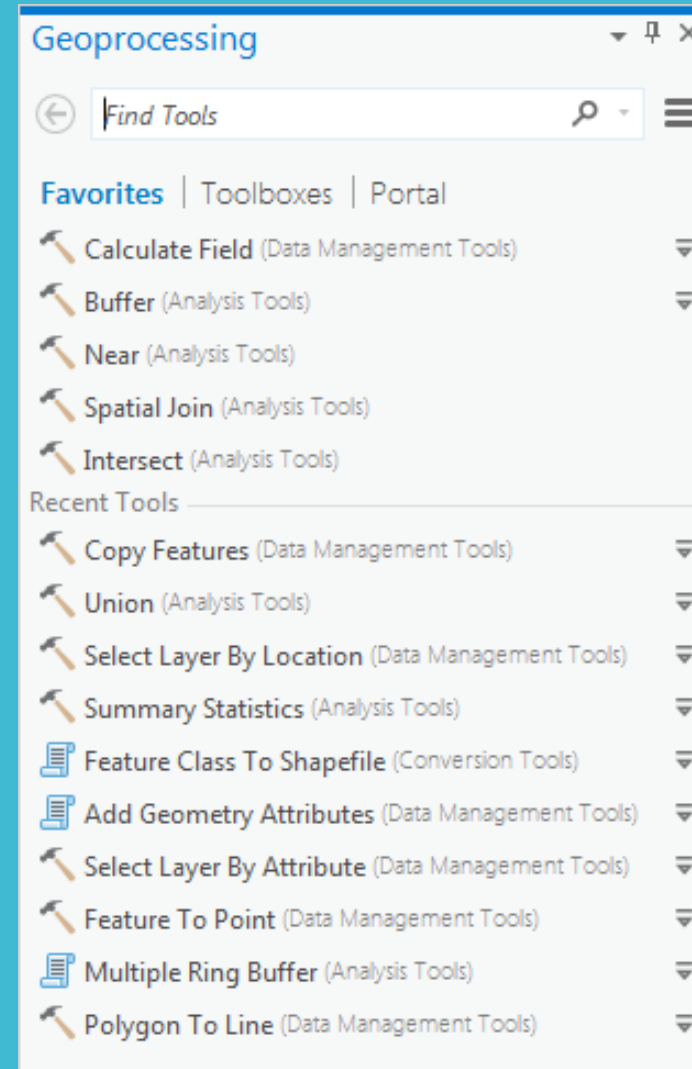

# Tips for Daily Use

- Map and layout relationship
- Geoprocessing trail
- Symbology interface
- Legend interface
- Drawing order
